

It's ok to be told you're shallow, if you're in an **ALASKAN**

The Woolldridge Alaskan is the super shallow running, sports car type of the Woolldridge Fleet. It doesn't take a lot of power for this agile, sure-footed boat to display incredible handling and superior shallow water performance. Check out the formed ribs on the semi-v hull and the exclusive Woolldridge tunnel pioneered over three decades ago. This hull design combined with the unique tunnel enables this boat to maneuver like none other. It gets on step quickly and negotiates through narrow twisting waterways to get at the best of fishing. Alaskans are constructed of all-welded aluminum for durability and strength. Woolldridge builds the Alaskan as a roomy 18' 8-incher. You can select an open boat with a console or tiller, or the windshield model with large walk-thru design and broad recessed, self-draining bow for easy access. Standard features such as the built-in 36 gallon under floor fuel tank leave more fishing room where needed. It also lowers the center of gravity to add stability and enhance cornering. The unique formed ribs on the semi-v hull provide traction on hard turns. The exclusive Woolldridge tunnel enables the Alaskan to rally through corners with clean water funneled to the jet for optimal motor performance. The entire Woolldridge hull design is built to add strength without unnecessary weight. Alaskans come with a full width self-bailing transom shelf that's handy for fishing gear. The large walk-thru two-piece windshield enables excellent visibility with good protection from the elements. It makes beach access over the bow a breeze. Welcome aboard large coolers and fishing friends young and old. Woolldridge boats have been refined through over 100 years of superior boat building. Rest assured that all Woolldridge boats come with a lifetime limited hull warranty for the original owner.

Brand X Boats

Wooldridge Boats exclusive jet tunnel offers the best in shallow water running and handling in challenging river running conditions. The tunnel allows the jet foot to be raised for protection, a clean water feed and ram effect. It also provides traction for controlled and predictable performance in tight quarters.
