

Alaskan 18' & 20' Models

18' Alaskan Windshield shown

Shallow river jet boating at its finest

Run shallower and corner harder with this quintessentially designed Wooldridge, the one and only, legendary Alaskan. The Wooldridge Alaskan model combines a uniquely classic design with modern sleek lines and gives you the ultimate outboard jet powered river sled! Redesigned in 2023, the new Alaskan features more displacement with a wider 66" bottom, larger windshield for improved visibility, sturdy diamond plate floors, higher sides, transom swim step, anchor rope storage, and more! It doesn't take a lot of power for this agile, sure-footed boat to display incredible handling and superior shallow water performance. The formed ribs of the semi-vee hull and exclusive Wooldridge jet tunnel ensure its maneuverability potential. It gets on step quickly and negotiates through narrow twisting waterways to get to the remotest of upriver fishing grounds.

Alaskans are constructed of all-welded aluminum for durability and strength. They are available in 18' and 20' versions as open console, tillers, or full windshield models that feature a large walk-through design and broad recessed, self-draining bow for additional space and easy beach access entry. The Alaskan's long list of standard features also includes our built-in, under-floor 36-gallon fuel tank which leaves more room where needed most as well as lowers the center of gravity to add stability and enhance cornering. Our stand-up gunnel design with toe-kick provides comfort and additional room inside the cockpit and a full width self-bailing transom shelf is handy for setting easy-to-reach gear on. There's so much more, of course, to the Alaskans design and meticulously thought out features! Wooldridge's boats have been refined through four generations of superior boat building. Rest assured that all Wooldridge boats come with a Limited Lifetime Hull Warranty for the original owner.

BOAT SPECIFICATIONS

Wooldridge Boats exclusive jet tunnel offers the best in shallow water running and handling in challenging river running conditions. The tunnel allows the jet foot to be raised for protection, a clean water feed and ram effect. It also provides traction for controlled and predictable performance in tight quarters.
