Configurable filters. ? Send any captured packets to remote machine. ? Replay the captured packets. ? Send a traffic file to remote machine. ? Move a traffic file to a different folder. ? View a traffic file with the graphical user interface. ? Delete a traffic file. ? View a log file of captured packets. ? View a log file of filtered packets. ? View a log file of recorded packets. ? Open a traffic file in the graphical user interface. ? Save a traffic file as a.zip file. ? Save a traffic file as a.gz file.

SurfRecorder Crack With License Key For Windows [Updated] 2022

? Make MAC address recognizable and personalizable in the records. ? Easier to identify the active clients on your network. ? Modify protocol headers of the recorded data. ? Make HTTP request only when the session is active. ? Support both IPv4 and IPv6. Notes: ? Open the macro and select a source address, then specify a destination address. The selected address will be removed before the URL is used. ? Sometimes a Webpage has not loaded completely when you view it. You can record all the packets and view later. ? "Analyze" menu on the interface creates a recording filter that will identify the source and destination address of the traffic. When this is enabled, you will see the displayed information for the packets. ? Many packets have source or destination ports, but they are removed from the traffic because they were not relevant for the task. ? "TCP" and "UDP" list in the options show whether the content type is TCP or UDP. ? Right click on the interface can be used to switch between IPv4 and IPv6. ? The macros can only be viewed in realtime mode. ? In exchange mode, you can view or clear the macro. ? To do the bulk-export and bulk-import of the records, you should use the "Save" and "Load" options on the interface. To reload a file, click the "Load" menu item on the interface. Note: ? In a busy network, the filter macro may identify only a small portion of the packets. ? Only the active sessions are stored. The filters create a limitation for the collected data. ? The main menu is for general operation. ? All the macros are recorded to the default path. ? The recorded data file has a fixed length. If the file is longer, the content will be truncated. ? The active session can be viewed or cleared. ? The saved macro can be viewed or cleared. ? The imported macros can be viewed or cleared. Please use this menu: ? "Filter" to view the recorded packets. ? "Edit" 81e310abff

System Requirements:

Supported Operating System: Microsoft Windows 10, 8.1, 8, 7, Vista SP2, XP SP3, Intel Core 2 Duo/Core i3/i5, 4GB RAM, 800MHz processor or higher, Windows 7, Intel Core 2 Duo/Core i3/i5, 4GB RAM, 800MHz processor or higher, Vista or Windows 8 or later 64-bit OS, 8GB free space on hard disk, 20GB of free space on hard disk, 512MB of RAM or higher,
